Xper²: from names to expertises

Xper² is a versatile management system for storage, edition, analysis and on-line distribution of descriptive data. It dynamically creates interactive keys for identifying specimens. Xper² does not require any special computer skills. It is a powerful program with a user-friendly and intuitive interface aimed at professional taxonomists as well as neophyte naturalists who merely want to identify specimens using a ready-made application. Xper²’s users are taxonomists, teachers, fauna and flora experts (for biodiversity monitoring or survey), ecologists researchers.

Taxonomy and Phylogeny

- Dombeyoideae of the Mascarene Archipelago
- Bamboos of Cambodia, Laos and Vietnam
- Genets and Omans

Animal welfare

- Corals of the Mascarene Islands

Identifying and Inventoring

- Open to other systems
- SDD Import/Export

Epidemiologic monitoring

- Towards interoperability
- Xper is a powerful tool for editing and managing taxonomic descriptions. Download for free your Windows™ Mac™ or Linux version in French, English, Spanish or our latest Chinese version at:
